

STAO2008

“Learning through STSE”

The theme for this conference captures the intent to provide a conference featuring student-centred learning experiences and resources that address the most important science and technology-related issues facing society and the environment today.

Similarly, the logo is designed to capture the interconnections between Science, Technology, Society, and the Environment (STSE), and the four main pathways that our students will need to choose from as they pursue their education: Apprenticeship, College, University, and Workplace.

We were fortunate to have Will Poirier, a highly talented Grade 12 student at Acton District High School (Halton DSB), as our logo designer. After high school, Will is planning on studying either graphic design or Mechanical CADD.
